

MODULE 10

Capstone: End-to-End Modernization

Day 2 · Optional or Stretch for MVP

ADOBE STOCK PLACEHOLDER

Suggested search: "software development team celebrating success (wide hero banner)"

LEARNING OBJECTIVES

- Execute a full modernization flow as a coordinated team.
- Demonstrate planning, coding, deployment, and operational validation.
- Produce a delivery narrative and lessons learned.

WHY THIS MODULE MATTERS

The capstone is a synthesis module.

In MVP phase one, it should be used only once the core six modules run cleanly with no unresolved provisioning issues.

CONCEPT MAP

Every prior module converges into one traceable, deployed increment.

WHAT TIES IT TOGETHER

- Rearchitect vs. rehost is the vocabulary the team's plan is judged against (Module 1, Microsoft CAF).
- The Epic → Feature → Story → Task hierarchy is how the team's slice gets scoped (Module 2, Azure Boards).
- Readiness probes gate live traffic to whatever the team deploys (Module 7, Kubernetes docs).
- A required status check is the safety net that blocks a broken build from shipping (Module 8, GitHub Docs).
- Bicep provisions the target environment the team's demo actually runs in (Module 9, Microsoft Learn).

COURSEWARE FOCUS

- Combine the full toolchain into a team delivery flow

WHAT “DONE” LOOKS LIKE

- “The capstone is a synthesis module” — it doesn't teach new tools, it proves the prior nine work together.
- Combined artifacts required from Modules 1, 3, 4, 6, 7, and 8; optional artifacts from Modules 2, 5, and 9.
- MVP guidance: defer the capstone to release 2 until the core six modules run cleanly end to end.

TOOLS & RESOURCES

Master Architecture

dotnet-architecture/eShopOnWeb or dotnet/eShop

Final repository for end-to-end modernized delivery.

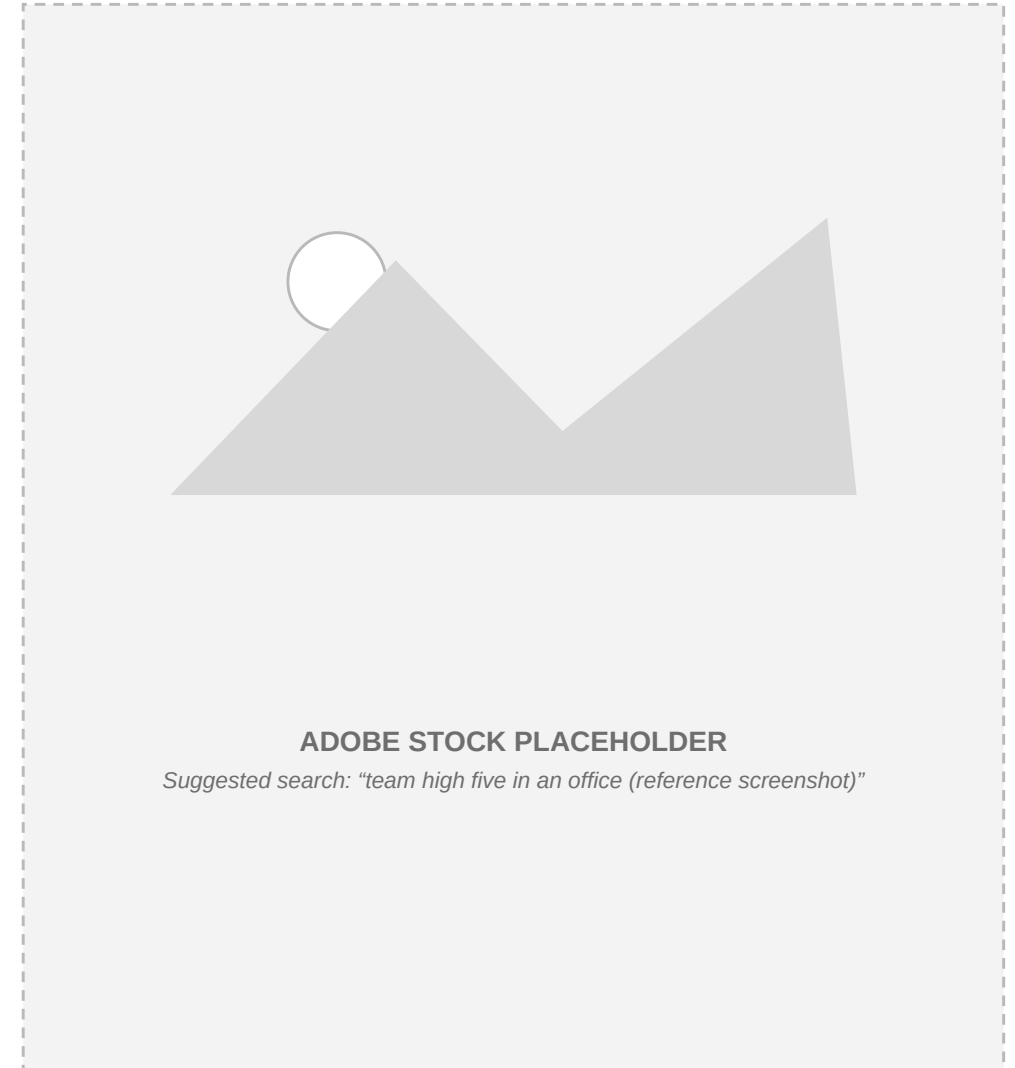

Integrated Stack

Combined Module 2 ADO board + GitHub Actions + Red Hat OpenShift + Azure App Insights

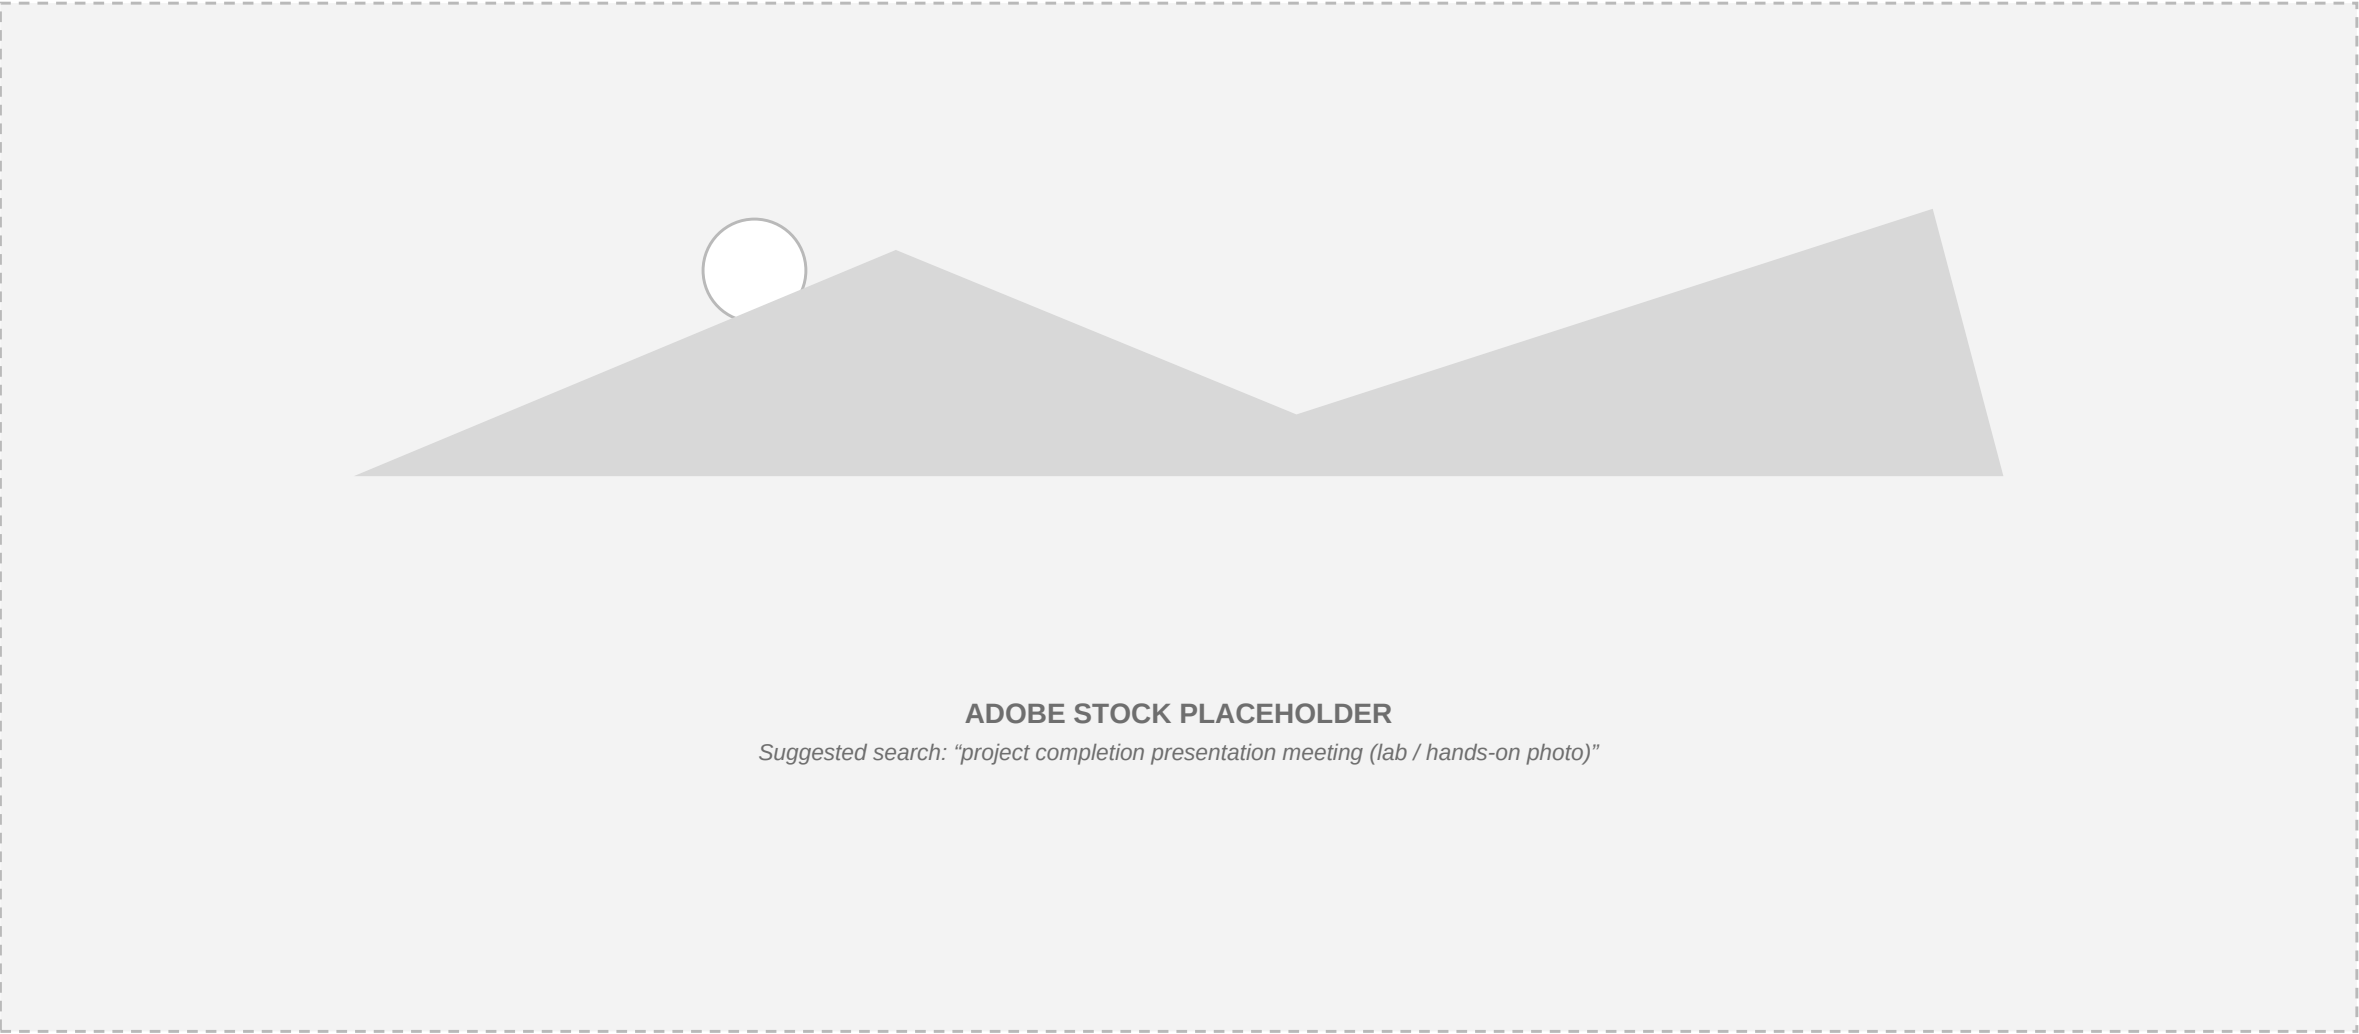

Final student team challenge and debrief roadmap.

SUPPORTING ASSETS

- Combined artifacts from Modules 1, 3, 4, 6, 7, and 8
- Optional artifacts from Modules 2, 5, and 9

LAB 10: CAPSTONE END-TO-END

LAB STEPS

Goal: Execute a full modernization slice from planning through deployment verification.

Requires: Modules 1, 3, 4, 6, 7, and 8 completed, with team roles assigned.

- Step 1 — Define acceptance criteria and the sprint slice.
- Step 2 — Implement the selected modernization changes.
- Step 3 — Build and test through the CI pipeline.
- Step 4 — Deploy to the target environment.
- Step 5 — Validate operations and present outcomes.
- Validation: acceptance criteria are met, with complete pipeline and deployment evidence.

KNOWLEDGE CHECK: Capstone: End-to-End Modernization

What is the primary goal of a capstone module in a technical training course?

- A. Introduce entirely new tools that were not covered before
- B. Let learners apply and integrate everything they learned in an end-to-end, team-based scenario
- C. Replace all of the prior labs
- D. Test typing speed

KNOWLEDGE CHECK: Capstone: End-to-End Modernization

What is the primary goal of a capstone module in a technical training course?

- A. Introduce entirely new tools that were not covered before
- B. Let learners apply and integrate everything they learned in an end-to-end, team-based scenario**
- C. Replace all of the prior labs
- D. Test typing speed

KNOWLEDGE CHECK: Capstone: End-to-End Modernization

Which delivery mechanic from Module 8 acts as the safety net that blocks a broken capstone build from shipping?

- A. Manually emailing the team
- B. A required status check / quality gate in the CI/CD pipeline
- C. Deleting the failing tests
- D. Skipping code review
